Category: Development

This course provides training in modern web design using Bootstrap. It is ideal for web designers who wish to leverage Bootstrap—a toolkit based on HTML and CSS—to easily create responsive websites that display correctly on mobile, tablet, and desktop devices.

Objectives

1. Ability to design web pages that adapt to various device types
2. Ability to select and utilize different Bootstrap components effectively
3. Ability to define media queries for display control
4. Ability to design and arrange layouts for optimal responsiveness

Target Audience

Individuals who want to develop web pages optimized for all device types.

Prerequisites

1. Basic knowledge of website development
2. Basic understanding of HTML, CSS, and JavaScript

System Requirements

1. Windows 10 or Windows 11
2. Microsoft Visual Studio (any supported edition)
